# PERCENTAGES

Learning how to compute percentages is a very practical skill to have because it's something we use in everyday life. Try your hand at computing the following.

**1. Andrea found the robotics set she's been eyeing for ages on sale! The kit originally cost \$69.90 but it's on sale at 65% off. How much does Jeannie need to pay and how much does she save?**

---

**2. Amber, Sabrina, and Merry are splitting a pizza. The pizza costs 14 dollars. If they decided to tip 20%, how much will they tip? How much will they end up paying?**

---

**3. Zach paid \$20 for a big bag of cat food. Once he got home, he found out that the cat food she bought was on sale at 15% off. How much did it cost originally? How much did she save?**

---

**4. Lily is helping her brother Timmy to sell cookies for a school project. To thank her for helping, Timmy offered her a \$0.75 for every \$15 box of cookies she sells. What is the rate of her commission for every sale?**
